

# THE POWER OF BEING UNDERSTOOD

# FUTURE OF TECHNOLOGY: AI AND BLOCKCHAIN

What is the next iteration of the internet evolution?

June 2024

# The Challenge of Technology-related Guidance

Technology is a fast, ever-changing area where nuanced details matter.

Blockchain in 2014 looks completely different in 2024 as it will look completely different in 2034.

As we think about these topics, we need to think about the principles which guide us not only today but well into the future.

*While the nuances matter, hopefully the principles and framework still apply.*

# So what exactly is a Blockchain anyways?

A Blockchain is a ledger where transactions are recorded and confirmed **anonymously**. It's a record of events that is **shared between many parties**. More importantly, once information is entered, **it cannot be altered**.

Blockchains are virtual computers that run on top of a network of physical computers that trade off performance (overhead of consensus mechanism) for the novel property that you can *make credible long-term commitments to users and developers.*

Chris Dixon

General Partner, Andreessen Horowitz

# Bitcoin was merely one of the first applications

“Blockchain is to Bitcoin, what the internet is to email. A big electronic system, on top of which you can build applications. Currency is just one.”

—Sally Davies

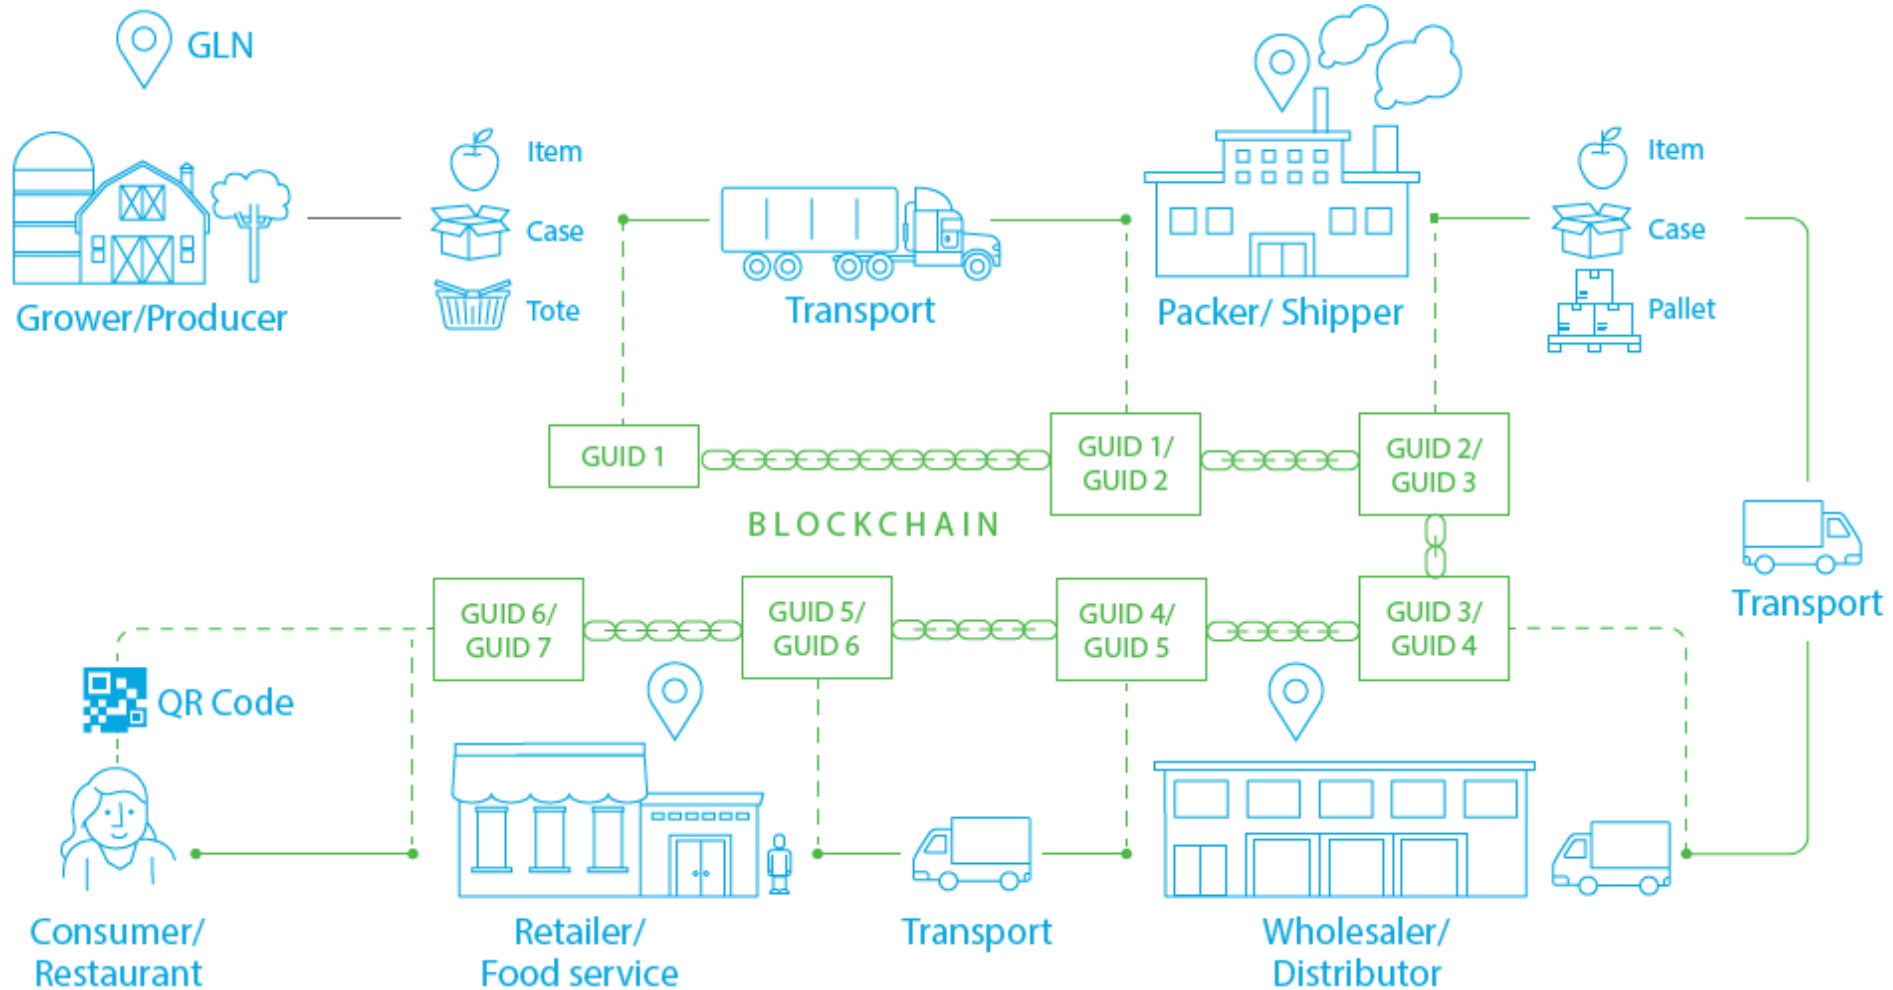

# Questions for Consideration

- If blockchains are immutable (permanent, unchangeable data), if there is a threat to independence, can you safeguard that threat to an acceptable level?
- What constitutes being 'independent' of a blockchain?

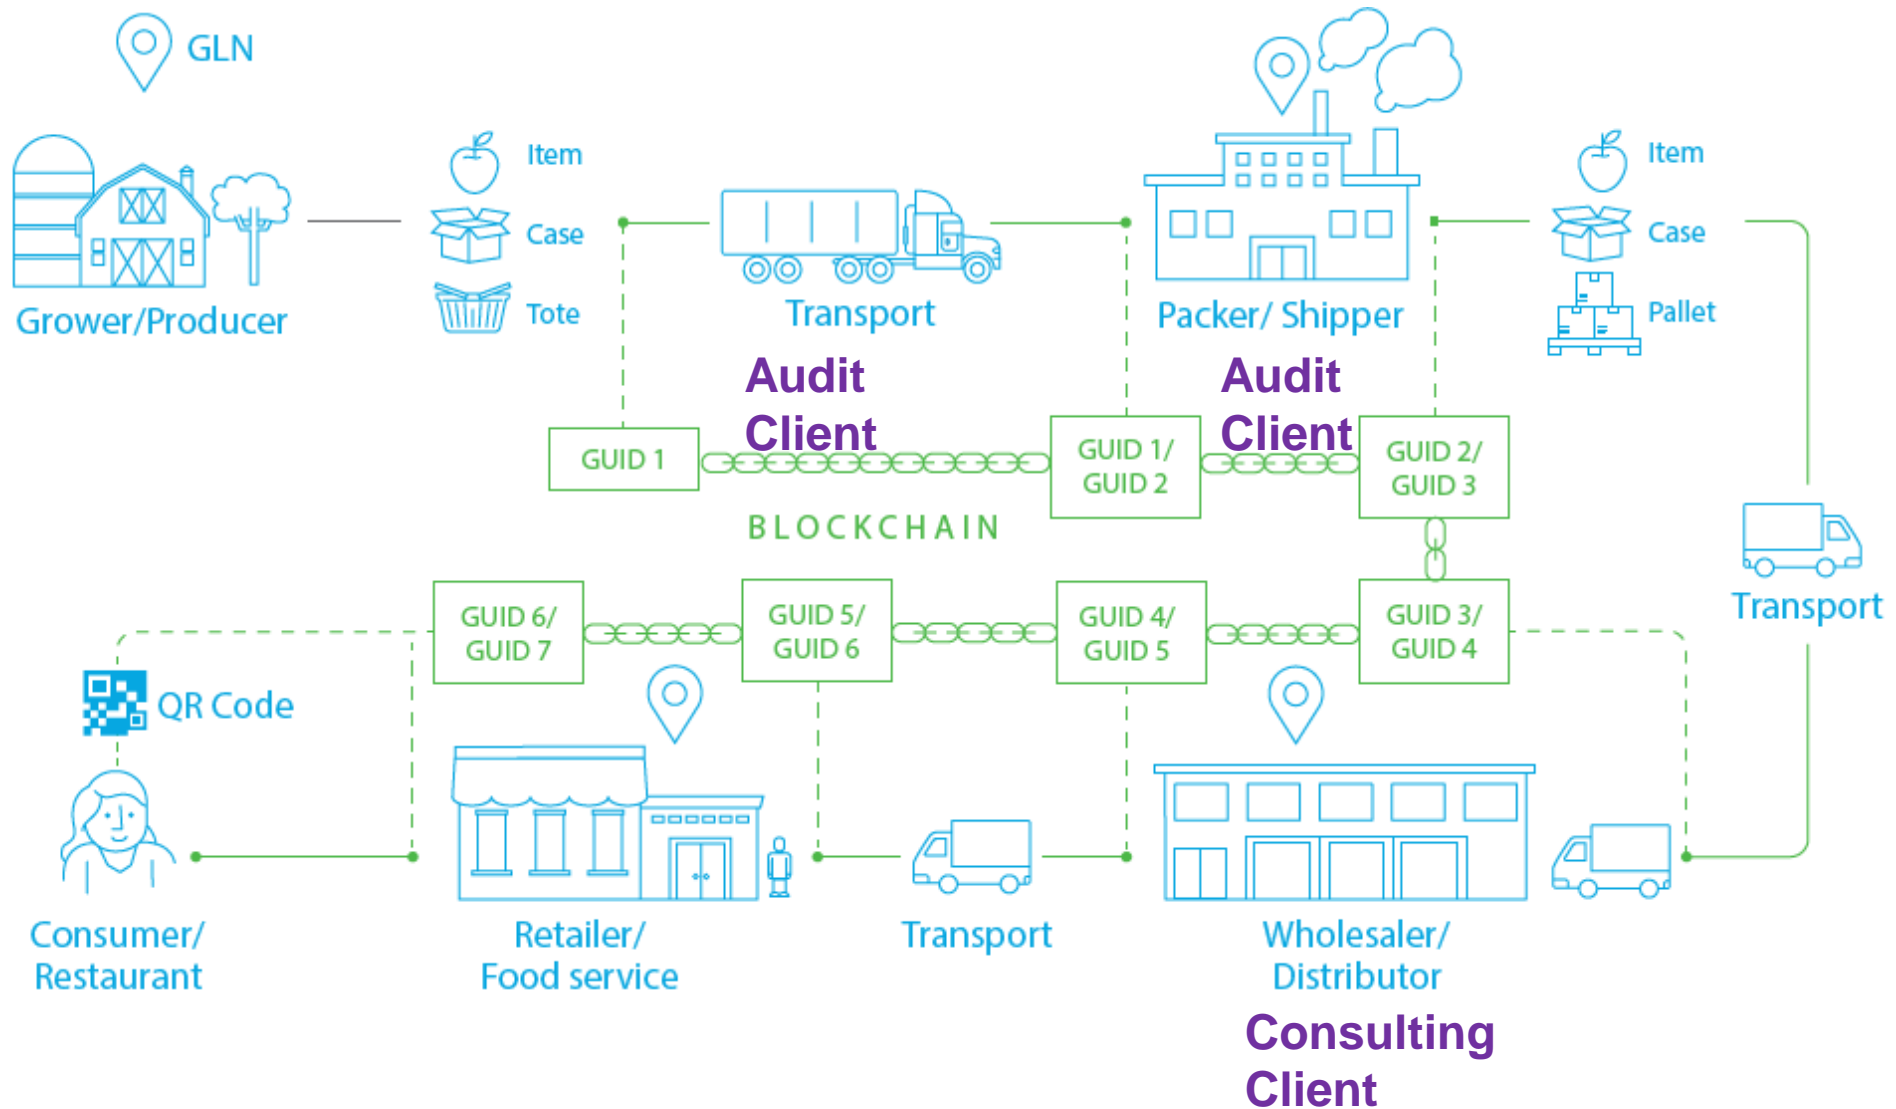

# BUILDING BLOCKCHAINS AND INDEPENDENCE

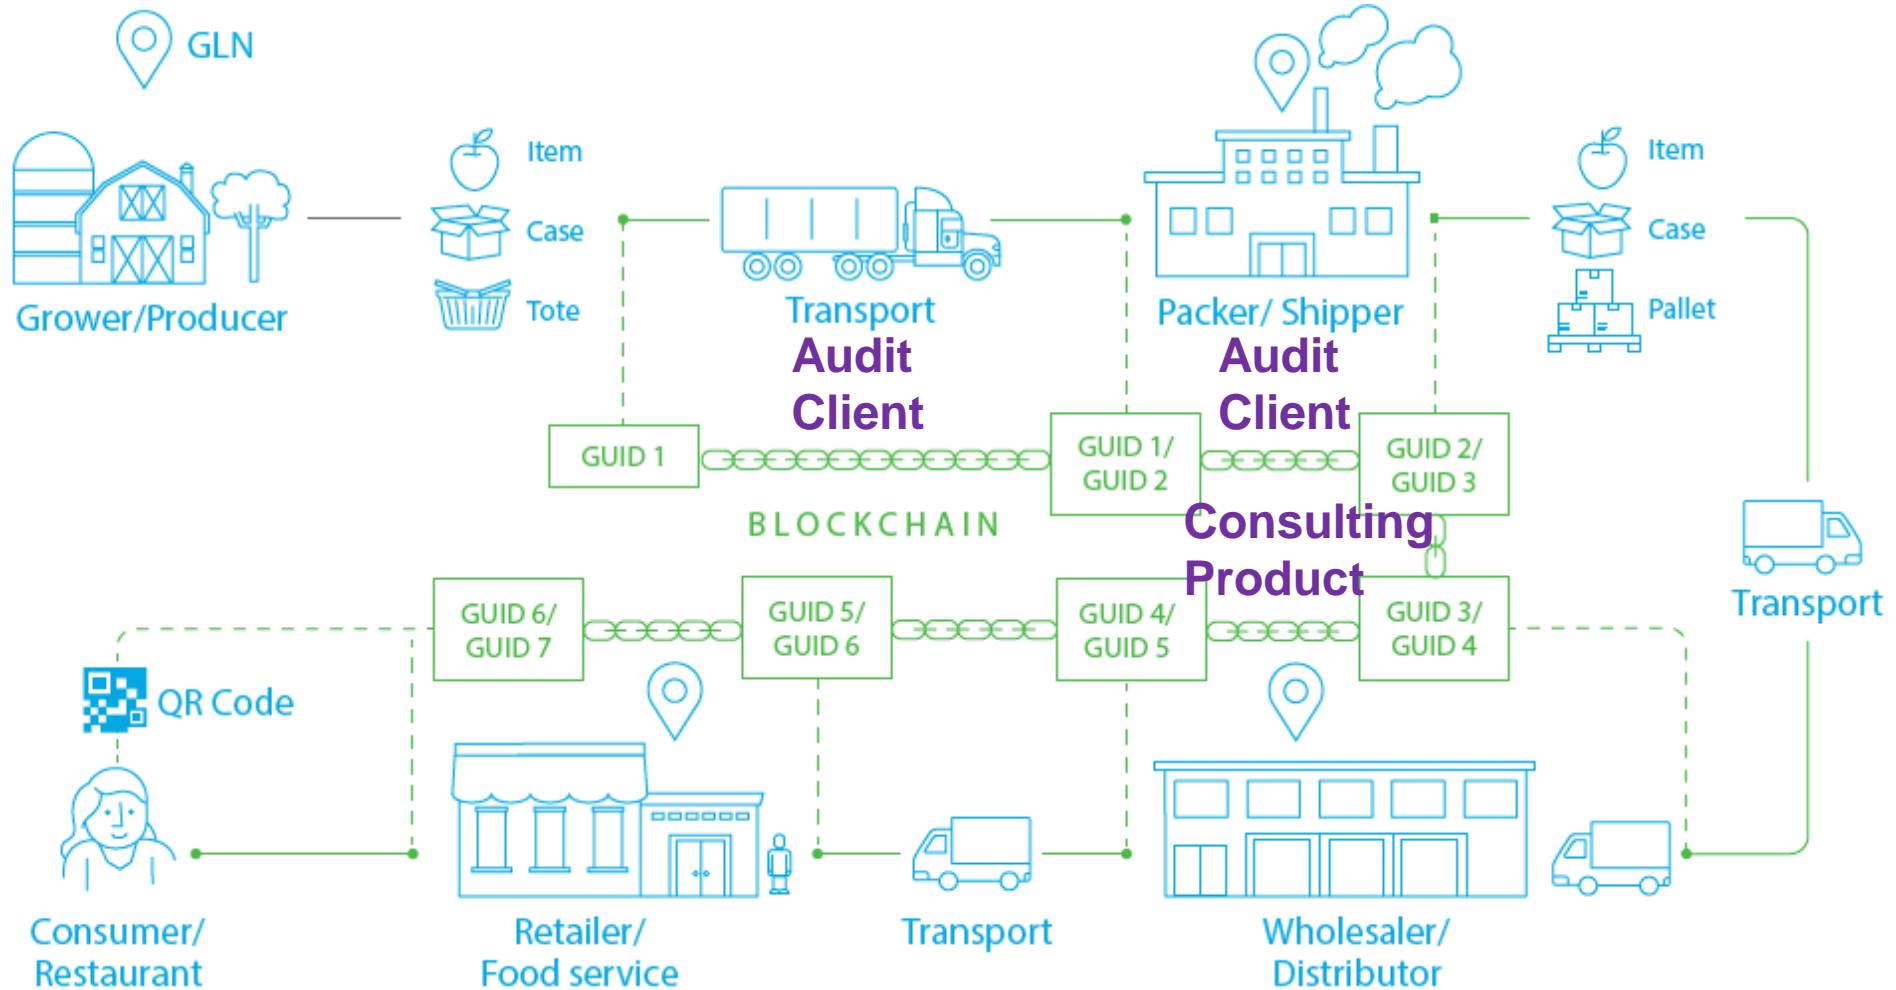

# Tracing Food on a Blockchain and Independence

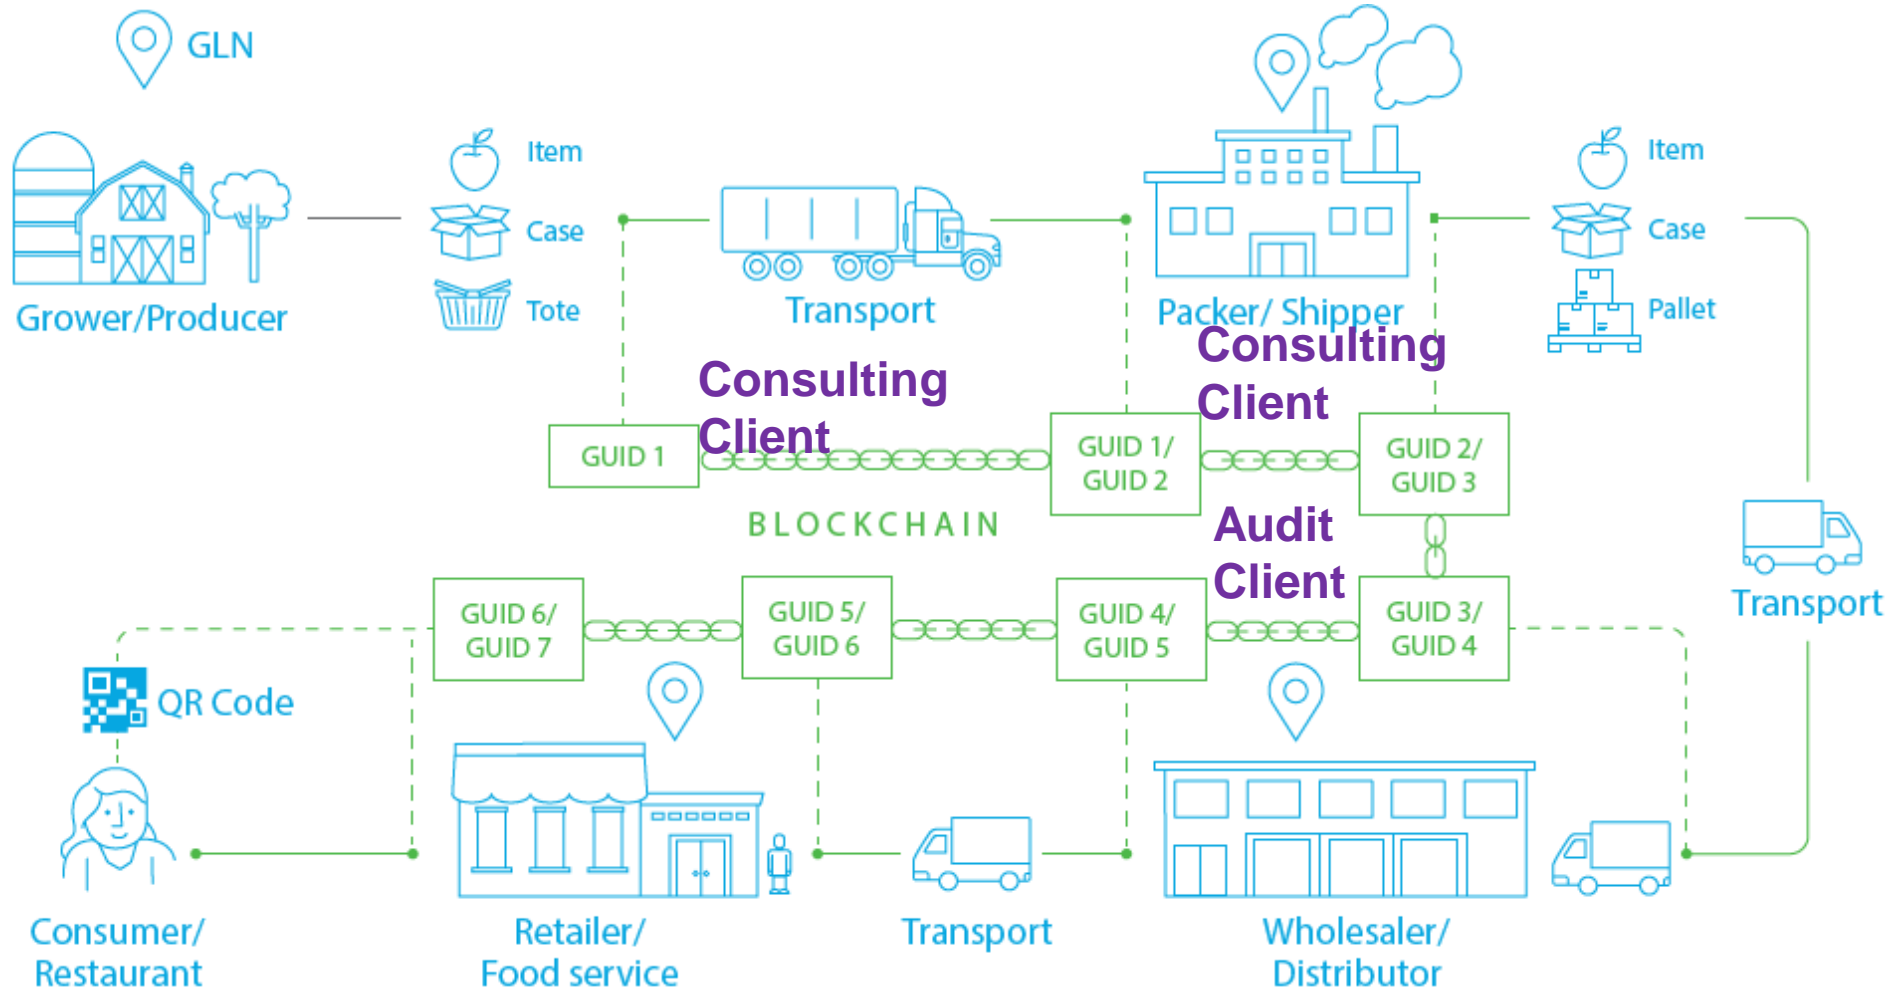

# Tracing Food on a Blockchain and Independence

# Tracing Food on a Blockchain and Independence

# Questions for Consideration

- Does implementing a blockchain for a client analogous to implementing any other technology?
- As a shared database – potentially of financial data – how do you assess the intricacies of independence?
- How does the relationship that the users of the blockchain have change the potential threats to independence?

# The Future of The Internet

**Web1** (90' – 05') *Read Only* – Open protocols

**Web2** (05' – 20') *Read-Write* – Walled gardens

**Web3** (20' –  $\infty$ ) *Read-Write-Execute* – Trustless infrastructure driven by a blockchain

# Questions for Consideration

- Does the independence framework support the constantly changing technology landscape?
- How do we address the concept of “decentralized” as it relates to independence?
